DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the and a primary valve positioned in said body portion of said housing in communication with said coolant and air channels and selectively movable between a first configuration closing said coolant channel and said air channel, a second configuration enabling said coolant to flow through said coolant channel, and a third configuration enabling the compressed air stream to flow through said air channel, a trigger coupled to said primary valve for user movement of said primary valve between said first and second and third configurations, a trigger mounted in said housing and extending therefrom for movement between first, second, and third configurations; air delivering means cooperating with said trigger for delivering a compressed air stream through said air channel to said second outlet port when said trigger is at said second configuration; and actuating means cooperating with said trigger for actuating said canister to deliver a portion of said coolant through said coolant channel to said first outlet port when said trigger is at said third configuration, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure

Application/Control Number: 10/756,559

Art Unit: 3749

must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Lilja. Lilja shows a canister at least partially containing a pressurized coolant (11, fig. 1); a housing having a body portion and a handle (fig. 2), said body portion defining first and second outlet ports (end of 59 and 65, fig. 2) and said handle defining an inlet port capable of receiving a compressed air stream (57, fig. 2), said body portion being removably coupled to a top of said canister (24, 43, fig. 1); a coolant channel extending between said canister top and said first outlet port for selectively communicating said coolant therebetween (24, 65, fig. 2); an air channel extending between said inlet port and said second outlet port for selectively communicating a compressed air stream therebetween (65, fig. 2); and a primary valve positioned in said body portion of said

Application/Control Number: 10/756,559

Art Unit: 3749

housing in communication with said coolant and air channels and selectively movable between a first configuration closing said coolant channel and said air channel (fig. 5), a second configuration enabling said coolant to flow through said coolant channel (fig. 4), and a third configuration enabling the compressed air stream to flow through said air channel (fig. 3), a trigger coupled to said primary valve for user movement of said primary valve between said first and second and third configurations (fig. 2).

Allowable Subject Matter

Claims 1-11 are allowed.

Claims 14-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to spray apparatus in general: Tench et al (4948042), Brooke et al (5415584), Lilja (3,937,253), Courts (2699403), Heinrich (1,382,640).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth B Rinehart whose telephone number is 703-308-1722. The examiner can normally be reached on 7:30 -4:30.

Art Unit: 3749

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ira Lazarus can be reached on 703-308-1935. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
